SUMMARY

2nd-year B.Tech Computer Science (IoT + AI/ML minor) student at IEM Kolkata with CGPA 8.70. Experienced in building end-to-end ML pipelines, NLP applications, and object-oriented systems. Hackathon winner, 7+ certifications from IBM, Google, and Microsoft. Seeking AI Engineering and Software Engineering internships to apply skills in real-world production environments.

TECHNICAL SKILLS

Languages:	Python, C, Java, MATLAB
AI / ML:	Scikit-Learn, NumPy, Pandas, TF-IDF, Logistic Regression, Regression Analysis, NLP, HuggingFace Transformers
Tools & Platforms:	Git/GitHub, Google Colab, Streamlit, Gradio, Hugging Face, Google Cloud (GCP), Jupyter Notebook
CS Fundamentals:	Data Structures & Algorithms, OOP, Computer Architecture, Discrete Mathematics
Concepts:	Machine Learning, Generative AI, Data Analytics, Sentiment Analysis, Text Summarization

PROJECTS

Controllable AI Text Summarizer [\[GitHub\]](#)

Python · HuggingFace Transformers · Gradio · Streamlit · Generative AI | IEM Hackoasis 2.0 Hackathon

- Engineered a domain-aware text summarizer using HuggingFace Transformers with tone customization, keyword highlighting, and adjustable word limits.
- Deployed an interactive Gradio web interface enabling real-time summary generation for arbitrary input lengths.
- Collaborated in a team environment under hackathon time constraints, delivering a fully working NLP demo.

Sentiment Analysis of Social Media Posts [\[GitHub\]](#)

Python · NLP · Scikit-Learn · TF-IDF

- Built an end-to-end NLP pipeline to classify tweets into positive, negative, and neutral sentiments achieving ~68% test accuracy.
- Applied text preprocessing (stop-word removal, tokenization) and TF-IDF feature extraction before training a Logistic Regression classifier.
- Evaluated model performance using precision, recall, F1-score and confusion matrix metrics.

Students Performance Analysis & Prediction Model [\[GitHub\]](#)

Python · Scikit-Learn · NumPy · Pandas · Google Colab

- Designed a regression-based ML model to predict student academic scores from multi-feature datasets.
- Performed exploratory data analysis and feature correlation visualizations to identify key performance drivers.

Smart Course Registration & Academic Planner System [\[GitHub\]](#)

Java · OOP · UML Design

- Designed and implemented a course management system enforcing credit-limit and prerequisite constraints using OOP principles.
- Modelled system architecture via UML class diagrams; applied inheritance, polymorphism, and modular design patterns.

EXPERIENCE

Java Programming Intern · CodeAlpha

Nov 2025 – Dec 2025

- Developed OOP-based Java applications applying encapsulation, inheritance, and polymorphism.
- Strengthened understanding of class hierarchies and program structure through guided projects.

Python Programming Intern · Codsoft

Oct 2025 – Nov 2025

- Built modular Python applications including logic-based programs and file-handling utilities.
- Practiced structured debugging and clean coding practices on real-world problem sets.

C Programming Intern · Cognifyz Technologies

Sep 2025 – Oct 2025

- Implemented data structure programs (queues, heaps, linked lists) in C with focus on memory management.

HACKATHONS

■ Winner — Blueprints of Tomorrow: Industry 5.0 Idea Hackathon · IEM Institute of Fundamental Research

- Proposed and designed an Arduino + IoT-driven automated waterbody garbage collector, winning against competing teams.

Participant — IEM Hackoasis 2.0 · Institute of Engineering & Management

- Built the Controllable AI Text Summarizer (HuggingFace + Gradio) as a team under hackathon constraints.

EDUCATION

CERTIFICATIONS

- Introduction to Artificial Intelligence — IBM (Coursera)
- Foundations of AI & Machine Learning — Microsoft (Coursera)
- Python for Data Science, AI & Development — IBM (Coursera)
- Machine Learning Basics — Sungkyunkwan University (Coursera)
- Foundations of Data Analytics — Google (Coursera)
- Google Cloud Computing Fundamentals — GCP Skills Boost
- Infrastructure in Google Cloud — GCP Skills Boost
